

DRIVING INSTRUCTIONS

You will be given the OK to enter the START area. The Starter/Timer will then tell you when to mount the lift truck. You can then start the motor, adjust forks, engage transmission, & release parking brake. The starter will ask “Are you ready to drive?” You will indicate YES or NO. If YES, the starter will check if your seat belt is secured. If not fastened, you will be reminded to secure it. (You will lose points). You may then start when you are ready. Timing will begin when the front of the forks cross the START line.

Explanation of tasks:

1. “Pipe Mover” – there is a length of PVC pipe, placed off center on the dunnage on the left side of Task #1. Using the sideshifter, pick it up, center it, and transport it over to the dunnage on the right side of the Task. Deposit the pipe on the dunnage with the index lines on the pipe aligned with those on the dunnage.
2. “Appliance Picker” – at the equipment rack, there are two appliance cartons on pallets. Pick the one off the top shelf and back around – following the arrows – in order to deposit it on the bottom shelf from the other side of the rack.
3. “Pallet Transfer” – there will be a stack of pallets in one of the two squares outlined on the pavement. Pick up the pallets and transfer them to the other outlined square.
4. “Dumpster Driver” – pick up the dumpster and transport it in reverse through the slalom course of cones to the left of the chute. Drive forward through the chute, deposit the dumpster back on the marks and back down through the chute.
5. “Return Merchandise” – pick up one of the appliance cartons from the bottom of the shelf and deposit it on the top shelf.

Return to the START/FINISH area. You must squarely park within the area, properly lower the forks and engage parking brake (in that order). Timing will stop when you have engaged the parking brake.
